CYBERSECURITY SLAs: MANANGING REQUIREMENTS AT ARM'S LENGTH

Matthew J. Butkovic, CISSP, CISA

Symposium on Cyber Security Incident Management for Health Information Exchange

June 26, 2013

Software Engineering Institute | **Carnegie Mellon**

Takeaways

- ► Organizations are increasing reliance on third party information technology services. Examples include:
    - ► Cloud Computing
    - ► Data backup
    - ► Operating partners
- ► Unless cyber security requirements are identified and communicated, organizations have little reason to believe their needs will be met
- ► You can't outsource risk to your organization
- ► Cyber security SLAs can help reduce risk to your organization

Audience Poll

1. Does your organization document specific security objectives in agreements with third parties?

2. Does your organization include measures of cybersecurity performance in third party agreements?

3. Does your organization monitor compliance with security objectives in agreements with third parties?

4. Is cybersecurity performance considered when selecting third parties?

Agenda

► Consequences of Losing Control

► State of the Practice

► A Better Cyber Service Level Management Process

When Control is Lost

▶ *"One caveat of outsourcing is that you can outsource*

business functions, but you cannot outsource the risk and responsibility to a third party. These must be borne by

the organization that asks the population to trust they will do the right thing with their data."

-Verizon 2012 Data Breach Investigations Report

When Control is Lost

► Why you should care about granting control of your data to service providers

  ► Selected breach incidents

    ► New York State Electric and Gas (2012)

    ► California Department of Child Support Services (2012)

    ► Thrift Savings Plan (2012)

    ► Epsilon (2011)

    ► Silverpop (2010)

Data Breach Liability
- An increasingly contentious issue in outsourcing

- Providers are looking to significantly limit liability

- Damage to brand and reputation can far exceed the compensation

- Clients are pushing for more specificity in security processes operated by the service provider

Software Engineering Institute | Carnegie Mellon

Risks in Dependencies

- Reliance on third parties means a potential loss of control
  - Reduced visibility into how your data is
    - Stored
    - Accessed
    - Transmitted
- The ownership of information security risk remains with you
  - This risk can be managed
    - Service Level Agreements
   - Robust management processes

State of Cyber SLAs – Field Research

**Does your organization document security objectives in agreements with third parties?**

- No
- Yes

41%
59%

Does your organization include measures of security performance in agreements?

- No
- Yes

41%
59%

Does your organization monitor compliance to security objectives in agreements?

- No
- Yes

47%
53%

Is cybersecurity performance considered when selecting third parties?

- No
- Yes

26%
74%

Standard SLAs…

- … frequently indemnify the provider to the greatest extent possible, limiting the provider's exposure.

- …often lack specific cyber security measures, apart from availability metrics

- …usually place the burden of detecting and reporting failures on the customer

- "SLAs are not about increasing availability; their purpose is to provide the basis for post-incident legal combat.[1]"

  - Compensation paid for service failure is connected to the cost of the service, not to total losses

  - Ex: a large retailer loses $50m in business, but compensated $300 for the outage they experienced on Black Friday[2]

SLA Restitution

	Amazon EC2	Azure Compute	Google Apps	Rackspace	Terremark/ Verizon
Credit	10% if <99.95	10% if <99.95 25% if <99	3 days if<99.9 7 days if <99 15 days if <95	5-100%	$1/15 min up to 50% of bill
Bill affected	Future	Current	Current	Current	Future
Credit filing window	30 days	1 month	30 days	30 days	30 days
Other comments		Must report within 5 days	$ instead of service permitted		

Lisa Spainhower,"Cloud Provider High Availability", January 18, 2013 IFIP WG10.4 Conference on Dependable Computing and Fault Tolerance, Tavira, Portugal

Examples of Cloud SLAs

► Vague language:

   ► "Each party will protect the other party's confidential information with the same standard of care it uses for its own information."

6. Confidential Information.

6.1 Obligations. Each party will: (a) protect the other party's Confidential Information with the same standard of care it uses to protect its own Confidential Information; and (b) not disclose the Confidential Information, except to Affiliates, employees and agents who need to know it and who have agreed in writing to keep it confidential. Each party (and any Affiliates' employees and agents to whom it has disclosed Confidential Information) may use Confidential Information only to exercise rights and fulfill its obligations under this Agreement, while using reasonable care to protect it. Each party is responsible for any actions of its Affiliates' employees and agents in violation of this Section.

6.2 Exceptions. Confidential Information does not include information that: (a) the recipient of the Confidential Information already knew; (b) becomes public through no fault of the recipient; (c) was independently developed by the recipient; or (d) was rightfully given to the recipient by another party.

6.3 Required Disclosure. Each party may disclose the other party's Confidential Information when required by law but only after it, if legally permissible: (a) uses commercially reasonable efforts to notify the other party; and (b) gives the other party the chance to challenge the disclosure.

Best Practices in Cyber SLAs

- SLA management practices auditors expect to find
  - "Specific and enforceable stipulations in the outsourcing agreement that activities performed by the service provider are subject to controls and audits as if they were performed by the service user itself"
  - "Inclusion of provisions requiring the service provider to monitor compliance with the SLA and proactively report any incidents or failures of controls"
  - "Adherence to the service user's security policies"

  Source: ISACA IS Auditing Guide G4: Outsourcing of IS Activities to Other Organizations

Best Practices in Cyber SLAs

- ▶ Guidance from NIST
  - ▶ Advocates that a lifecycle approach be applied to the development and management of third-party services
  - ▶ Provides lists of key questions and factor categories for services
  - ▶ Describes the "organizational factor" in service management

    "   …*In many cases, long accepted internal controls and business practices that have developed over time due to natural business unit divisions or regulatory requirements may have to be reconsidered when an IT security service provider is engaged.*"

    Source: NIST Special Publication 800-35-Guide to Information
         Technology Security Services

Identify Cyber Requirements

- **Confidentiality**
  - Who has authorized access?

- **Integrity**
  - Who is authorized to make changes to the data?

- **Availability**
  - When does the data needed to be accessed?

- **Use service (mission) requirements to develop requirements**
  - Good:
    - Aligns with needs of the business
    - Can be a check against too much investment/expense
  - Bad:
    - Potentially expensive to develop

Ideas for Measures

► Percentage of (successful, failed) access attempts on confidential data by unauthorized (networks, users, processes)

► Number of incidents involving (successful, failed) unauthorized attempts to export data

► Percentage of inventoried confidential data accessed during cybersecurity incidents

► Number of incidents involving (successful, failed) unauthorized modifications to confidential data

Monitor Compliance

- ▶ Use established and agreed measures to monitor the provider

- ▶ Measure regularly, not just at the start and end of the relationship

Use the Results

► Use measures to:

  ► Ensure your relationships continue to meet your business needs

  ► Identify opportunities to adjust the cybersecurity controls for the service

  ► Evaluate your cybersecurity investment and identify where investments can change

  ► Select third party providers

Conclusion

▶ Organizations are increasing reliance on third party services. Examples include:

  ▶ Cloud Computing

  ▶ Data backup

  ▶ Operating partners

▶ Unless security requirements are identified and communicated, organizations have little reason to believe their needs will be met

▶ Better cyber SLA needs to be developed, as a part of a management process
