SEI Launches Software Acquisition Go Bag

October 1, 2025 — The Software Acquisition Pathway was designed to help Department of Defense (DoD) programs follow efficient and effective practices to acquire, develop, integrate, and deliver secure software fast enough to meet the department's dynamic mission needs. The SEI recently launched its Software Acquisition Go Bag initiative to help programs adapt their acquisition practices to accelerate software delivery.

SEI acquisition experts are developing customizable collections of Tactical Guides, webcasts, templates, and other tools full of proven software acquisition strategies and tactics. The SEI will release new resources over time, based on user and community feedback.

"Our SEI team has helped hundreds of DoD programs deliver software-enabled capability through our unique integration of data-driven insights, software engineering research, and acquisition science," wrote the SEI's Eileen Wrubel, Rita Creel, and Brigid O'Hearn in a recent SEI Blog post. "We're packing that experience into the Go Bag so program teams can implement proven practices to drive successful outcomes."

Wrubel and O'Hearn will host a webcast October 22 to discuss the launch of the Software Acquisition Go Bag.

[5 Essential Questions for Implementing the Software Acquisition Pathway and the Tools to Tackle Them](#)

Eileen Wrubel, Rita Creel, and Brigid O'Hearn outline five essential questions to ask before implementing the Software Acquisition Pathway (SWP) and an SEI toolset to assist in the effort.

[A Call to Action: Building a Foundation for Model-Based Systems Engineering in Digital Engineering](#)

This blog post highlights a research agenda and calls to action for future work in MBSE and digital engineering from practitioners in the field.

[My AI System Works...But Is It Safe to Use?](#)

David Schulker, Matthew Walsh, and Emil Mathew introduce System Theoretic Process Analysis (STPA), a hazard analysis technique uniquely suitable for dealing with the complexity of AI systems.

[**Upcoming Events**](#)

Webcast - [Using LLMs to Evaluate Code](#), October 1

Mark Sherman will summarize the results of experiments investigating whether various large language models (LLMs) could correctly identify problems with source code.

Webcast - [Q-Day Countdown: Are You Prepared?](#), October 14

Brett Tucker, Dan Justice, and Matthew Butkovic will discuss the challenges to be expected with the realization of quantum computing capabilities.

Webcast - [5 Essential Questions for Implementing the Software Acquisition Pathway and the Tools to Tackle Them](#), October 22

Eileen Wrubel and Brigid O'Hearn discuss the launch of the Software Acquisition Go Bag resource kits, how to provide feedback for future Go Bag releases, and common questions when launching Software Acquisition Pathway programs.

[AAAI Fall Symposium: Engineering Safety-Critical AI Systems](#), November 6-8, Arlington, Va.

As AI is increasingly applied to new and more high-risk settings, a mature safety engineering discipline for AI becomes ever more critical. Join the SEI to advance the discipline of engineering AI for safety.
